VENDOR COMMUNICATIONS

We developed relationships with our Industry Partners, delved deeply into issues affecting the BES Directorate, exchanged meaningful information and incorporated many of your ideas. The Vendor Communications Forum has definitely helped make us a better organization.

In November 2011, BES established a new methodology to enhance government and industry relationships. We hosted vendor communications events that have benefited both BES and its industry partners. These distinct events are steps to make communications a central part of BES culture. BES vendor communications events have created a frequent dialogue between BES, our partners and potential partners, generated networking opportunities and created open and transparent processes. Through these initiatives, BES has fostered stronger government-industry relationships and enabled industry to directly hear some of the challenges and opportunities BES faces in order to continue to acquire, operate, sustain and enable enterprise IT capabilities to support the warfighter.

VENDOR COMMUNICATIONS INITIATIVES:

- Vendor Industry Day – Spring Upcoming Acquisitions
- Vendor Communications Website
- Vendor Communications Initiatives
- BES Reference Guide – Semi Annual Update
- BES Smart Guide – Semi Annual Update

Registration for Vendor Industry Day is free of charge and open to government and industry with experience and/or interest in each respective topic.

AF DSS is an Office of the Secretary of Defense (OSD) directed shipping/receiving/storing system mandated to provide Positive Inventory Control (PIC) of all AF-owned Nuclear Weapons Related Material (NWRM) processed at the Depot level. AF DSS passes critical financial and logistical (item management) data to D035K (Wholesale and Retail Receiving/Shipping System – WARRS) which then passes the data to D035J (Financial Inventory Accounting and Billing System – FIABS), thus impacting accounting and auditable records of NWRM. AF NWRM items are stored in multiple locations, but the only AF Wholesale (Depot Level) storage/repair facility for AF NWRM is located at the NWRM Storage Facility (NSF), Hill AFB, Ogden, UT.

AFEMS is a suite of systems and is assigned Data System Designator (DSD) C001. AFEMS is designed to provide the United States Air Force (USAF) with a worldwide accessible, dedicated, totally integrated, transaction-driven, processing system that enables accountability and management of approximately $34B worth of equipment resources. AFEMS is used by AF Equipment Managers world-wide to determine, authorize, account for, provide visibility to and report the types and quantities of equipment required to accomplish the AF mission and serves as a primary basis for organizational budget/buy programs. AFEMS hosts classified and unclassified components that are physically and logically separated. The unclassified component consists of five modules: Asset Inventory Management (AIM), Equipment Requirements System (ERS), Support Equipment (SE), electronic Access Request Management System (eARMS) and Allowance Standard Retrieval System (ASRS). The AFEMS classified component is a National Security System (NSS) that in addition to the Support Equipment functionality, also hosts the Classified Equipment Requirements Computation (CERC) application that is assigned DSD Laboratories, Inc. D039. CERC computes USAF gross/net requirements for centrally procured, nonexpendable, ND2, NF2 items. DPAS has become the new system of record for equipment and AFEMS will sunset by 30 Sept 19.

CSWS DE facilitates data between the Contractor Inventory Control Points (CICPs) and AF legacy systems that do not allow direct commercial access. This enables contractors to input and view, with Government concurrence, needed information. It is automated web-based tech solution to collect spares, parts usage, failure rate and pipeline data from contractors and pass that data to Government legacy systems. This provides asset visibility from forward operating locations to supply systems, to contractor and perhaps to supplier inventories. Spares Support IPT have on-line edit and query capabilities and users visibility of spares and usage data via the internet. Introduction: CSWS DE was an AF/A4LR initiative to provide visibility of contractor controlled weapon system item usage data during all phases of operational use. REQUIREMENTS MANAGEMENT SYSTEM (RMS)  

RMS is used to forecast/determine, budget and procure the range and depth of aircraft spare parts required based on aircraft and depot maintenance usage and readiness and sustainability goals. The RMS D200 supports the warfighter by computing procurement requirements for spares and determining depot level maintenance repair needs for the AF. RMS D200 encompasses the automated and manual functions involved in the materiel requirements process.

This process forecasts and controls procurement and repair requirements of materiel needed for logistics support of weapon systems operated by the AF. The maintainer of the warfighter aircraft benefits by having available to them the correct mix of spare parts needed to satisfy planned weapon system availability needs. The materiel involved are in direct support of the AF weapon systems and have a significant impact on the AF's ability to carry out its mission.
